A Ethical Statement

Institutional Approval. The MedAlign-CN corpus was developed under IRB-style oversight. All text data were collected with explicit institutional consent and anonymized.

De-identification. We adopt a hybrid pipeline combining deterministic regex and transformer-based NER.

Data License. MedAlign-CN is released under an **institutional non-commercial research license**.

B Annotation Guidelines (Excerpts)

Detailed guidelines for relative time normalization, cross-document linking, and adjudication strategies.

C Prompt Templates & JSON Schema

Listing 1: Structured event-time JSON schema.

```
1 {
2   "patient_id": "<ID>",
3   "events": [
4     {
5       "trigger": "<span>",
6       "arguments": {
7         "type": "<Type>",
8         "anatomy": "<span?>",
9         "value": "<span?>"
10      },
11      "time": "<YYYY-MM-DD | REL>",
12      "evidence": ["<s1>", "<s2>"]
13    }
14  ],
15  "relations": [
16    {"head": 0, "tail": 1, "type": "Before|
17      After|Overlap"}
18  ]
19 }
```

Listing 2: GPT-4 prompt excerpt (English, CN-aware).

```
1 You extract clinical events and times from
  Chinese notes.
2 Return ONLY valid JSON following the schema.
3 Normalize relative times (e.g., Post-op Day 3
  -> REL:POSTOP+3D).
```

D Implementation Details

For full implementation details, including hyperparameters and training infrastructure, please refer to the source code repository.
